

# Magnetostrictive level transmitter

## High-resolution measurement principle

### Models FLM-S, FLM-T, FLM-P

KSR data sheet LM 20.01

for further approvals  
see page 3

## Applications

- High-accuracy level detection for almost all liquid media
- Chemical, petrochemical industry, natural gas, offshore, shipbuilding, machine building, power generating equipment, power plants
- Process water and drinking water treatment, food and beverage industry, pharmaceutical industry

## Special features

- Process- and procedure-specific solutions possible
- Operating limits:
  - Operating temperature:  $T = -90 \dots +450^\circ\text{C}$  [-130 ... +842 °F]
  - Operating pressure:  $P = \text{vacuum to } 100 \text{ bar}$  [1,450.4 psi]
  - Limit density:  $\rho \geq 400 \text{ kg/m}^3$  [25.0 lbs/ft³]
- Resolution < 0.1 mm
- Wide variety of different electrical connections, process connections and materials
- Explosion-protected versions

**Level transmitter with flange connection, model FLM-T**

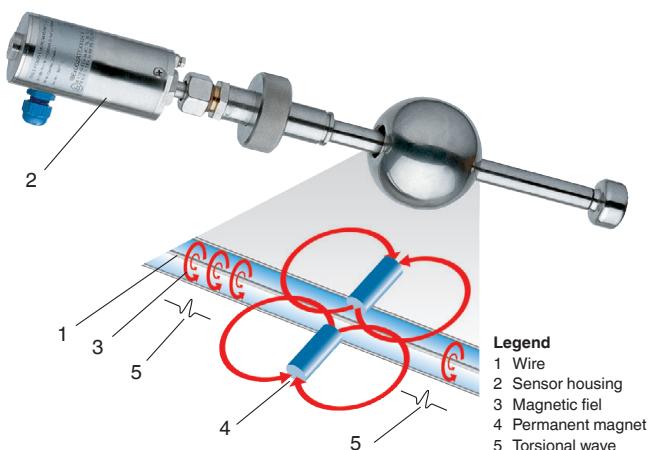

## Description

The model FLM-S, FLM-T and FLM-P level transmitters are used for the high-accuracy, continuous level detection of liquids and are based on determining the position of a magnetic float according to the magnetostrictive measurement principle.

## Further special features

- Large range of application due to the simple, proven functional principle
- Process connection, guide tube and float from stainless steel 1.4571, 1.4435, 1.4539 or plastic
- For harsh operating conditions, long service life
- Continuous detection of levels, independent of physical and chemical changes of the media such as: Foaming, conductivity, dielectric, pressure, vacuum, temperature, vapours, condensation, bubble formation, boiling effect, density change
- Signal transmission over long distances
- Simple installation and commissioning, onetime calibration only, no recalibration necessary
- Level displayed proportional to volume or height
- Parallel measurement of interface layer and overall level possible via HART® interface

## Illustration of the principle

## Design and operating principle

### Options

- Customer-specific solution
- Process connection, guide tube and float from special steel, titanium, Hastelloy (others on request)
- In combination with limit switch, stepless setting of the limit values over the entire measuring range

- The measuring process is triggered by a current impulse. This current produces a circular magnetic field (3) along a wire (1) made of magnetostrictive material fixed in the guide tube.
- At the point being measured (liquid level) there is a float with permanent magnets (4) acting as a position transducer.
- The superposition of these two magnetic fields triggers mechanical torsional wave (5) in the wire.
- This is converted into an electrical signal at the end of the wire in the sensor housing by a piezoceramic converter.
- The measured propagation delay enables the origination point of the mechanical wave, and thus the float position to be determined with high accuracy.

## Model overview

Level transmitter	Description	Materials					
		Stainless steel			Titanium 3.7035 (grade 2)	PP	PVDF
		1.4571 (316Ti)	1.4404 (316L)	1.4435 (316L)			
FLM-S (FFG-P)	Standard version	x	x	-	x	-	-
FLM-T (FFG-T)	High-temperature version	x	x	-	x	-	-
FLM-P (FFG-TP)	Plastic version	-	-	-	-	x	x

### Temperature range (process)

- Model FLM-S -60 ... +185 °C [-76 ... +365 °F]
- Model FLM-T -90 ... +450 °C [-130 ... +842 °F]
- Model FLM-P -10 ... +100 °C [14 ... 212 °F]

	T80A	18	80	76	23	25	250	665
	T98A	18	98	96	23	25	250	495
	T105A	18	105	103	23	25	250	369
	T120A	18	120	117	23	25	250	329

Special floats for higher temperature and pressure ranges are available on request.

Note: The optimum float will be selected after a feasibility test carried out by KSR Kuebler.

## Cylindrical float

Material	Version	Suits guide tube Ø in mm	Ø A in mm	B in mm	Ø C in mm	Max. operating pressure in bar	Max. operating temp. in °C	Limit density 85 % in kg/m³
Stainless steel 1.4571 (316Ti)	V44A	14	44	52	15	16	250	818
	V44A	14	44	52	15	25	200	800
Titanium 3.7035 (grade 2)	T44A	14	44	52	15	16	250	550
PVC	P55A	16	55	54	22	3	60	798
	P80A	20	80	79	25	3	60	573
Polypropylene	PP55A	16	55	54	22	3	80	595
	PP80A	20	80	79	25	3	80	431
PVDF	PF55A	16	55	69	22	3	100	821
	PF80A	20	80	79	25	3	100	681

Special floats for higher temperature and pressure ranges are available on request.

Note: The optimum float will be selected after a feasibility test carried out by KSR Kuebler.

## Accessories

Description	Order number
 <b>Display module, model DIH50</b> 5-digit display, 20-segment bar graph, without separate power supply, with additional HART® functionality. Automatic adjustment of measuring range and span. Secondary-master functionality: Setting the measuring range and unit of the connected transmitter using HART® standard commands possible. Optional: Explosion protection per ATEX	On request
